

Caddo Parish, LA

Risk-assessment baseline packet

Unit **County area 22017** Release **2026-10** As of **2026-09-28** Storm Events data through **2026-06-30**

Hazard Plain is an independent product built from public federal data. It is not a FEMA document and is not reviewed or endorsed by FEMA or any state agency.

A starting point for the plan's risk assessment (FEMA Local Mitigation Plan Review Tool, Element B). It does not replace local data or FEMA review. Section headings say which FEMA review item each table supports; whether an item is satisfied is decided by the plan and its reviewers.

OPENFEMA DISCLAIMER

This product uses the Federal Emergency Management Agency's OpenFEMA API, but is not endorsed by FEMA. The Federal Government or FEMA cannot vouch for the data or analyses derived from these data after the data have been retrieved from the Agency's website(s).

Supports B1-a: hazards

Hazards NRI does not cover: check locally

- dam failure (incl. upstream dams)
- levee failure
- flash flood as its own subtype
- ice jams
- debris flows
- erosion (riverine and coastal)
- land subsidence and sinkholes
- expansive soils

Supports B1-c: extent

Extent: scale, observed range and worst recorded event per hazard

Hazard	Scale	Records <i>count, years</i>	Observed range	Worst recorded event	Most damaging (when different)	How it applies to members	Note
Avalanche	none (count and damage)	0					Physical measure: in event narratives only; local data required.
Coastal Flood, Storm Surge/ Tide	none in data (FIRM for depth)	0					Flood depth: see the FEMA Flood Insurance Rate Map.
Cold/Wind Chill, Extreme Cold/Wind Chill	wind chill	6, 2010 to 2026 (6 zone-level)	2 days to 4 days (median 3 days); 6 with a recorded value	4 consecutive days, 2026-01-24 to 2026-01-27, 2 direct deaths, zone-level	Cold/Wind Chill, 2010-01-07, \$500,000 property; \$0 crops, reported for the zone (2010 dollars)	Zone-level records: applies countywide; national data do not locate these events within the county.	Wind chill: in event narratives only; local data required.
Frost/Freeze (outside NRI Cold Wave definition)	crop damage	0					Temperature: in event narratives only; local data required.

Hazard	Scale	Records <i>count, years</i>	Observed range	Worst recorded event	Most damaging (when different)	How it applies to members	Note
Drought	US Drought Monitor D-scale	57, 1996 to 2026 (57 zone-level)	7 days to 537 days (median 61 days); 17 with a recorded value	537 days (about 17.6 months), 2010-10-01 to 2012-03-20, a run of 18 consecutive Storm Events drought records, zone-level	Drought, 2000-08-01, property not reported; \$100,000,000 crops, reported for the zone (2000 dollars) (as recorded; larger than this county's annual agriculture value in the National Risk Index; confirm with the county or the state extension service)	Zone-level records: applies countywide; national data do not locate these events within the county.	Storm Events enters a drought at D2 or worse east of the Rockies and D3 or worse from the Rockies west (NWS Instruction 10-1605); NRI drought counts D3 and D4 only.
Earthquake	Modified Mercalli (local data)	0					No Storm Events record; local data required (e.g., USGS).
Hail	hail size (inches)	641, 1958 to 2026	0.5 in to 4.5 in (median 1 in); 639 with a recorded value	4.5 in hail, 2000-04-23; same size also recorded on 1995-04-22	Hail, 1995-04-22, \$50,000,000 property; crops not recorded (1995 dollars)	Event records naming member places: Shreveport city (132 records), Blanchard town (47 records), Oil City town (22 records), Vivian town (22 records), Greenwood town (19 records), Mooringsport town (18 records), Hosston village (11 records), Rodessa village (5 records), Belcher village (2 records), Gilliam village (2 records); and 1 more member place (see the XLSX file).	
Excessive Heat, Heat	heat index (narratives)	104, 1996 to 2025 (104 zone-level)	1 day to 94 days (median 4 days); 66 with a recorded value	94 days, 2011-06-01 to 2011-09-02, from 5 records, 3 of them monthly summaries (a monthly summary record covers most or all of a month; it does not count days at wave conditions), zone-level		Zone-level records: applies countywide; national data do not locate these events within the county.	Heat index: in event narratives only; local data required.
Hurricane, Tropical Storm, Tropical Depression	Saffir-Simpson	4, 2005 to 2020 (4 zone-level)		Strongest recorded (records with damage, a wind speed or direct casualties first, then storm type, category and wind): Tropical Storm record, 2008-09-13, \$1,000,000 property; \$0 crops, reported for the zone (2008 dollars), 4 direct injuries (reported for the zone); NWS zone LAZ001 (CADD0), zone-level: may include parts of neighboring counties		Zone-level records: applies countywide; national data do not locate these events within the county.	Storm Events files every zone of a storm's episode under the storm's event type and category, so a Hurricane (Typhoon) record, especially an inland or remnant one, does not by itself mean hurricane-force winds here; read the damage and wind columns.

Hazard	Scale	Records <i>count, years</i>	Observed range	Worst recorded event	Most damaging (when different)	How it applies to members	Note
Ice Storm	Sperry-Piltz (local data)	8, 1996 to 2000 (8 zone- level)		Ice Storm, 2000-12-24, \$106,000,000 property; crops not reported, reported for the zone (2000 dollars); NWS zone LAZ001 (CADD0), zone- level: may include parts of neighboring counties		Zone-level records: applies countywide; national data do not locate these events within the county.	Ice thickness: in event narratives only; local data required.
Flash Flood, Flood, Lakeshore Flood	damage and flood days (FIRM for depth)	287, 1996 to 2026 (8 zone- level)		Flood, 2015-06-01, \$8,200,000 property; \$0 crops (2015 dollars)		Event records naming member places: Shreveport city (92 records), Greenwood town (7 records), Mooringsport town (5 records), Vivian town (5 records), Blanchard town (2 records), Oil City town (2 records), Belcher village (1 record), Rodessa village (1 record). Zone-level records (8) apply countywide.	Flood depth: see the FEMA Flood Insurance Rate Map. Storm Events damage can be \$0 or blank even for a major flood, so the worst record here may not be the worst flood; compare FEMA Public Assistance by declaration in B1-d.
Debris Flow	none (count and damage)	0					Physical measure: in event narratives only; local data required.
Lightning	annualized frequency (the measure FEMA's Local Mitigation Planning Handbook names)	35, 1996 to 2025		Lightning, 2011-06-07, \$0 property; \$0 crops (2011 dollars), 1 direct death	Lightning, 2025-09-24, \$400,000 property; \$0 crops (2025 dollars)	Event records naming member places: Shreveport city (16 records), Greenwood town (4 records), Vivian town (2 records), Gilliam village (1 record).	Storm Events lists lightning with damage or casualties; physical measure in event narratives only; local data required.
High Wind and Strong Wind (outside NRI Strong Wind definition)	wind speed (kt and mph)	18, 1997 to 2025 (18 zone- level)	35 kt (40 mph) to 58 kt (67 mph) (median 43 kt (49 mph)); 18 with a recorded value	58 kt (67 mph) estimated, High Wind, 2001-02-16, 1 direct injury (reported for the zone); NWS zone LAZ001 (CADD0), zone- level: may include parts of neighboring counties	Strong Wind, 2008-03-18, \$500,000 property; \$0 crops, reported for the zone (2008 dollars)	Zone-level records: applies countywide; national data do not locate these events within the county.	
Thunderstorm Wind	wind speed (kt and mph)	827, 1955 to 2026	50 kt (58 mph) to 100 kt (115 mph) (median 54 kt (62 mph)); 624 with a recorded value	100 kt (115 mph), measurement type not recorded, Thunderstorm Wind, 1997-04-22		Event records naming member places: Shreveport city (135 records), Blanchard town (41 records), Vivian town (19 records), Mooringsport town (18 records), Greenwood town (15 records), Hosston village (13 records), Gilliam village (10 records), Oil City town (10 records), Ida village (9 records), Belcher village (7 records); and 1 more member place (see the XLSX file).	Speeds under 20 kt (likely entry errors) are left out of the observed range.

Hazard	Scale	Records <i>count, years</i>	Observed range	Worst recorded event	Most damaging (when different)	How it applies to members	Note
Tornado	Enhanced Fujita (F before Feb 2007)	109, 1950 to 2025	F/EF0 to F/EF4 (median F/EF1); 109 with a recorded value	F4 tornado, 1950-02-12, 9 mi path length (records before 1996 may include the whole path; rating and listing come from the county where the tornado began), 100 yd wide, \$250,000 property; crops not recorded (1950 dollars), 9 direct deaths, 40 direct injuries	Tornado, 2023-03-02, \$50,000,000 property; \$0 crops (2023 dollars)	Event records naming member places: Blanchard town (3 records), Oil City town (3 records), Shreveport city (3 records), Vivian town (3 records), Belcher village (2 records), Greenwood town (2 records), Hosston village (2 records), Gilliam village (1 record), Ida village (1 record), Mooringsport town (1 record); and 1 more member place (see the XLSX file).	From 1996 on, tornado records are per-county segments and length is the path length within this county (NWS Instruction 10-1605); records before 1996 may give the whole path length, including the path outside this county, and before 1996 a tornado is listed once, under the county where it began, with the whole path's rating; counties farther along the path may not list it. Length is not used to rank tornadoes.
Tsunami	none (count and damage)	0					Physical measure: in event narratives only; local data required.
Volcanic Ash, Volcanic Ashfall	Volcanic Explosivity Index (local data)	0					Physical measure: in event narratives only; local data required.
Wildfire	acres burned (local data)	4, 2011 to 2011 (4 zone-level)		Wildfire, 2011-09-05, \$400,000 property; crops not reported, reported for the zone (2011 dollars); NWS zone LAZ001 (CADD0), zone-level: may include parts of neighboring counties		Zone-level records: applies countywide; national data do not locate these events within the county.	Acres burned: in event narratives only; local data required.
Winter Storm, Heavy Snow, Blizzard, Lake-Effect Snow, Winter Weather, Sleet	none in data (snowfall local)	23, 2006 to 2026 (23 zone-level)		No damage reported in 23 records.		Zone-level records: applies countywide; national data do not locate these events within the county.	Snow depth: in event narratives only; local data required.

Where a hazard names more than 10 member places, the table lists the 10 with the most records; every place is in the XLSX file, sheet "B1-c Extent".

Storm Events records are more complete after 1996; before 1996 only Tornado (from 1950), Hail and Thunderstorm Wind (from 1955) exist. Zone-level records are placed with NWS zone-county files, which exist from 2020 on; an earlier record is placed by its zone number in the nearest later file only when its zone name matches that file, records from zones NWS renumbered are placed by name or left out, and a record whose zone is in no known file is left out of every count, so counts before 2020 can be low. Some current zones are also missing from the NWS files, so recent counts can be low too.

Dollars are nominal (as reported), labeled with the year; not adjusted for inflation.

The full list is in the XLSX file, sheet "B1-d Storm Events history" (2,123 rows).

Storm Events records are more complete after 1996; before 1996 only Tornado (from 1950), Hail and Thunderstorm Wind (from 1955) exist. Zone-level records are placed with NWS zone-county files, which exist from 2020 on; an earlier record is placed by its zone number in the nearest later file only when its zone name matches that file, records from zones NWS renumbered are placed by name or left out, and a record whose zone is in no known file is left out of every count, so counts before 2020 can be low. Some current zones are also missing from the NWS files, so recent counts can be low too.

Supports B1-e: probability

Probability: FEMA annualized frequency and descriptor per hazard

Hazard	FEMA annualized frequency (modeled) <i>unit per row</i>	Unit	In plain terms	Descriptor	Descriptor basis	NRI events or days in its record period (hail, wind and tornado are area- weighted, so can be fractional)	NRI period	Location	Note
Avalanche		events per year					1994 to 2023 (30 years)	see B1-f	Not Applicable in NRI for this county; no descriptor.
Coastal Flooding		events per year at a location (modeled)				not shown	modeled	see B1-f	Not Applicable in NRI for this county; no descriptor.
Cold Wave	0.684	event-days per year	about 0.684 days per year	Likely	event-days in 5 of 30 years, 1996 to 2025 (16.7%)	13	2005-11-12 to 2024-11-12 (19 years)	countywide	Frost/Freeze records are not counted in this descriptor: they record crop freezes, not cold waves.
Drought	24.9	event-days per year	about 24.9 days per year	Likely	event-days in 16 of 30 years, 1996 to 2025 (53.3%)	994	2000 to 2025 (25.25 years; D3 and D4 only)	countywide	
Earthquake	0.00151	annual probability at a location	chance a given location in the county has at least minor- damage shaking in a year: 0.151%			not shown	modeled	see B1-f	Descriptor not assigned: the NRI value is the chance at a location in the county, not how often the hazard affects the county, and Storm Events does not record earthquakes.
Hail	5.36	events per year	about 5.36 per year	Highly likely	FEMA annualized frequency (modeled)	204.0 (modeled)	1986 to 2023 (38 years)	countywide	
Heat Wave	20.7	event-days per year	about 20.7 days per year	Likely	event-days in 19 of 30 years, 1996 to 2025 (63.3%)	338	2005-11-12 to 2024-11-12 (19 years)	countywide	
Hurricane	0.0517	events per year	about 1 in 19 years	Possible	FEMA annualized frequency (modeled)	22	1851 to 2024 (Atlantic)	see B1-f	NRI counts hurricane and tropical storm tracks passing within storm-force wind range; federal declarations are counted separately in B1-d and need not match.
Ice Storm	1.47	event-days per year	about 1.47 days per year	Likely	event-days in 4 of 30 years, 1996 to 2025 (13.3%)	99	1946-12-31 to 2014-02-12 (67 years)	countywide	NRI gives about 1.47 ice storm event-days a year here (its annualized frequency over 67 years; not its event count divided by the years), but Storm Events has a record in only 4 of 30 years. NRI counts from a different source that records far more events than Storm Events, so this descriptor reads much lower than NRI's frequency; read the two together.

Hazard	FEMA annualized frequency (modeled) <i>unit per row</i>	Unit	In plain terms	Descriptor	Descriptor basis	NRI events or days in its record period (hail, wind and tornado are area- weighted, so can be fractional)	NRI period	Location	Note
Inland Flooding	3.11	event-days per year	about 3.11 days per year	Likely	event-days in 25 of 30 years, 1996 to 2025 (83.3%)	87	1996 to 2023 (28 years)	see B1-f	
Landslide	0.186	events per year (modeled)	about 1 in 5 years	Likely	FEMA annualized frequency (modeled)	not shown	modeled	see B1-f	
Lightning	64.2	days per year with a strike	about 64.2 days per year	Highly likely	FEMA annualized frequency (modeled)	not shown	1995 to 2023 (29 years; CONUS)	countywide	
Strong Wind	6.18	events per year	about 6.18 per year	Highly likely	FEMA annualized frequency (modeled)	236	1986 to 2023 (38 years)	countywide	
Tornado	0.858	events per year	about 0.86 per year	Likely	FEMA annualized frequency (modeled)	not shown	1950 to 2023 (EF2+); 1986 to 2023 (EF0-1)	see B1-f	
Tsunami		annual probability at the most exposed location (used in place of a county value)				not shown	modeled	see B1-f	Not Applicable in NRI for this county; no descriptor.
Volcanic Activity		annual probability				not shown	modeled	see B1-f	Not Applicable in NRI for this county; no descriptor.
Wildfire	0.000529	annual probability at a location	chance a given location in the county burns in a year: 0.0529%	Possible	Storm Events records in 1 of 30 years, 1996 to 2025 (3.33%)	not shown	modeled	see B1-f	Descriptor from Storm Events, not NRI: the NRI value is the chance at a location in the county, not how often the hazard affects the county.
Winter Weather	2.84	event-days per year	about 2.84 days per year	Likely	event-days in 13 of 30 years, 1996 to 2025 (43.3%)	54	2005-11-12 to 2024-11-12 (19 years)	countywide	NRI gives about 2.84 winter weather event-days a year here (its annualized frequency over 19 years; not its event count divided by the years), but Storm Events has a record in only 13 of 30 years. NRI counts from a different source that records far more events than Storm Events, so this descriptor reads much lower than NRI's frequency; read the two together.

FEMA annualized frequency (modeled) comes from the National Risk Index v1.20 (December 2025). It is not recorded events divided by years, and what it measures depends on the hazard. For most hazards it estimates how often the hazard affects this county each year: it counts events or event-days (drought, heat wave, cold wave, winter weather, ice storm and inland flooding are in days per year; lightning is the number of days per year with a recorded cloud-to-ground strike, from the NOAA Storm Prediction Center daily lightning climatology); it may count events in the surrounding area (hail, strong wind, tornado, hurricane and ice storm use a 49 km grid and buffers) and is averaged over the county's area; and some hazards use a minimum value for places with no recorded event. Earthquake, wildfire and coastal flooding are different: FEMA computes them for each census block and averages them over the county, so the value is the chance (for coastal flooding, the modeled number of floods per year) at a location in the county, which is lower than the chance that the hazard strikes somewhere in the county. Earthquake is the chance of at least minor-damage shaking (U.S. Geological Survey model); wildfire is the chance that a location

burns in a large fire (U.S. Forest Service burn probability); coastal flooding comes from FEMA flood zones and NOAA high-tide flooding, so it can be above 1 where high-tide flooding is frequent. Tsunami is the value at the county's most exposed location, from recorded events and modeled return periods. For these four hazards the packet gives no "1 in N years" and takes the descriptor from Storm Events (none for earthquake) unless the value is 1 or more a year. Landslide is a U.S. Geological Survey modeled county rate spread by slope susceptibility. Volcanic activity is the chance that a volcano affecting the county erupts in a year. Drought counts only extreme and exceptional drought (D3 and D4). Hail smaller than 1 inch is not counted: on 2010-01-05 the National Weather Service raised its severe-hail threshold from 3/4 inch to 1 inch, so smaller reports became less common after 2009 (NWS Service Change Notice 09-52). NRI hail frequency uses a 0.75 inch threshold.

Supports B2-a and B2-b: assets and impacts

Local data required

County-level starter. The plan must describe impacts for each participant and its own assets.

- Critical facilities and lifelines per hazard
- A problem statement per participant per hazard
- Changes in development in hazard-prone areas since the last approval, or a statement of none (E1-a)
- Future assets

Total = buildings + agriculture + population equivalence; FEMA values each expected death (or 10 injuries) at \$13.7 million (2024 dollars).

FEMA does not split Public Assistance by hazard. A declaration mapped to several hazards is listed under each of them with its full amount, so the per-hazard column must not be added up; the unit total counts each declaration once.

Dollars are nominal (as reported), labeled with the year; not adjusted for inflation.

FMA RL and FMA SRL are the Flood Mitigation Assistance definitions (44 CFR 77.2), the ones the FEMA Local Mitigation Planning Policy Guide cites; OpenFEMA's fmaRI field description omits the Increased Cost of Compliance clause of 44 CFR 77.2(i). NFIP repetitive loss (FEMA insurance definition, nfipRI) is 2 or more claims over \$1,000 in 10 years and can drop to false when a property is mitigated. Also shown: NFIP severe repetitive loss, any category, mitigated and currently insured.

Your state NFIP coordinator's list may use the NFIP insurance definition, so its counts can be higher.

Counts are aggregates of FEMA's public NFIP Multiple Loss Properties file (as of 2026-08-02). No property is identified. County assignment is FEMA's geocode.

Counts may differ from your state NFIP coordinator's list, which is the source the Handbook names.

In this county 6 properties are FMA repetitive loss but not NFIP repetitive loss, and 209 properties are NFIP repetitive loss but not FMA repetitive loss.

Exact counts; no count suppression.
